SUMMARY

Recent graduate and full stack developer. I'm handing out my application to assist you in the endeavours of your company~

TECHNOLOGIES

Some things I've worked with:

Javascript	React	ES6	Sketch App (UI/UX)

Node.js (Express/Hapi)	NoSql	Sql	React-Native

Swift (iOS)	Java (Android)	HTML5	CSS	API

Bot	Docker

PROJECTS/STARTUPS

2016 ECE Hackathon

📅 Feb 2016 - Feb 2016   📍 Startup Edmonton

Geolocation based Etsy.

- People told me that the UI/UX was memorable. It really stood out and that it was the best UI/UX in that hackathon. See AngelList photos
- I made a geolocation based eCommerce platform, wherein people can buy or sell goods based on their distance from the seller.
- I registered as a one man team. Node.js (hapi), Postgres, Mongo, Android (Java), Swift (iOS), Stripe, Sendgrid, and Google Maps API.

Won, Ehub Hackathon March 2016

📅 Apr 2016 - Apr 2016   📍 University of Alberta

Virtual Business Card

- Registered as a one man team. I was one of the winners. App seamlessly exchanges business cards with follow-ups through chat.
- People told me that they were really impressed with the features.
- Golang, Electron (Desktop), Swift (iOS), Java (Android), React, and Proximity Technology.

WORK HISTORY

Thurber Engineering

Materials Testing (Laboratory & Field)

📅 June 2010 - Oct 2014 📍 Counstruction SItes in Alberta

Thurber is a Materials Engineering Company

- I travel unto different sites to test concrete, soil, & other materials. Testing was done on-site or inside our laboratory.
- I had to work closely with Thurber's clients. Some of them are fortune 500 companies.

PROJECTS/STARTUPS

kindlebay.com
📅 Aug 2015 - Dec 2015   📍 Edmonton

Slack for students / college campus

- Real-time chat app using RethinkDB, Node (Hapi), Digital Ocean, AWS, SendGrid, and Vanilla JS for the backend.

Covet.in
📅 Sep 2015 - Sep 2015   📍 Edmonton

Covet is a fashion company who has partners in Hollywood

- They drop ship clothing to customers who are interested in the clothes that celebrities wear. It was like Shazam for clothing.
- They were a team of 7 using parts of Agile and Scrum.
- The tools were Meteor, TypeScript, Less, MongoDB, Angular 1

TxtCrunch
📅 Feb 2015 - May 2015   📍 Edmonton

iOS Swift Developer (4 people using scrum and agile)

- We worked with a client to help him create an iOS app that is very much a book exchange.
- It was created with Google API (Books, and Maps), iOS Swift, Facebook Parse, and Google API for Books and Maps.

Another Social Media App
📅 Feb 2015 - May 2015   📍 Edmonton

Full Stack Developer

- Teams composed of 6 people; DB synced with other teams.
- I did the backend, middle, client tier. Including writing the API.
- The tools we used were Python (Django) hosted onHeroku. It used Postgresql for storage

Android + ElasticSearch Forum
📅 Oct 2014 - 2014   📍 Edmonton

Android Developer

- This was a class project for a team of 6 using agile methods.
- It was like a geolocation based Reddit mobile app in Android using ElasticSearch
